Engineer Manual  
No. 1110-8-1(FR)

**DEPARTMENT OF THE ARMY  
U.S. Army Corps of Engineers  
Washington, D.C. 20314-1000**

EM 1110-8-1(FR)

31 December 90

**Engineering and Design  
WINTER NAVIGATION ON INLAND WATERWAYS**

**Table of Contents**

Subject	Paragraph	Page
<b>CHAPTER 1. INTRODUCTION</b>		
Purpose and Scope .....	1-1	1-1
Applicability.....	1-2	1-1
References .....	1-3	1-1
Bibliography and Definitions .....	1-4	1-1
Background .....	1-5	1-1
<b>CHAPTER 2. RIVER ICE MANAGEMENT STUDY</b>		
Section I.		
Study Concept		
General .....	2-1	2-1
Objectives .....	2-2	2-1
Elements .....	2-3	2-1
Section II.		
Study Elements		
River System Definition .....	2-4	2-1
Ice Problem Identification .....	2-5	2-1
Ice Forecasting .....	2-6	2-2
Structural Solutions .....	2-7	2-3
Operational Solutions.. .....	2-8	2-4
Recommended Plan .....	2-9	2-4
<b>CHAPTER 3. RIVER ICE PROBLEM IDENTIFICATION</b>		
Surveys Needed .....	3-1	3-1
Hydrology and Hydraulic Studies .....	3-2	3-1
Identification of Ice Problem Locations.. .....	3-3	3-2
<b>CHAPTER 4. ICE FORECASTING</b>		
Section I.		
General .....	4-1	4-1
Long-Term Water Temperature Forecasts		
Objective .....	4-2	4-1
Model Description.....	4-3	4-1
Model Operation .....	4-4	4-4
Model Results .....	4-5	4-6
Model Accuracy .....	4-6	4-7

	Subject	Paragraph	Page
Section II.	Mid-Winter Ice Forecasts		
	Objectives .....	4-7	4-7
	Forecast Model Description .....	4-8	4-7
	Hydraulic Model Description.....	4-9	4-8
	Thermal Model Description .....	4-10	4-10
	Ice Model Description .....	4-11	4-11
	System Parameters .....	4-12	4-15
	Physical Parameters .....	4-13	4-15
	Initial Conditions .....	4-14	4-16
	Boundary Conditions .....	4-15	4-17
	Model Output .....	4-16	4-17
	Model Calibration .....	4-17	4-18
	Model Operation .....	4-18	4-18
	Location of Field Measurement Sites .....	4-19	4-20
	Initial Conditions Generator.....	4-20	4-21
	Boundary Conditions Generator .....	4-21	4-21
	Modes of Operation .....	4-22	4-22
	Model Results .....	4-23	4-22
<b>CHAPTER 5.</b>	<b>ICE-RELATED HYDROMETEOROLOGICAL DATA COLLECTION AND MONITORING</b>		
Section I.	Introduction .....	5-1	5-1
	Numerical Data		
	Near Real-Time Data Collection .....	5-2	5-1
	DCP with Ice-Related Sensors .....	5-3	5-2
	GOES Satellite - WRSC Authorization.....	5-4	5-7
	Direct Ground Readout Station .....	5-5	5-8
	Water Control Data System (WCDS) .....	5-6	5-8
Section II.	Imagery		
	Introduction .....	5-7	5-8
	Aerial Photography by Hand-Held Camera .....	5-8	5-9
	Aerial Videotapes .....	5-9	5-12
	Ground-Based Video.. .....	5-10	5-16
<b>CHAPTER 6.</b>	<b>STRUCTURAL SOLUTIONS</b>		
Section I.	Ice Retention Methods		
	Introduction .....	6-1	6-1
	Flexible Structures .....	6-2	6-1
	Rigid or Semi-Rigid Structures .....	6-3	6-10
	Structures Built for Other Purposes .....	6-4	6-16
Section II.	Ice Control at Locks		
	General .....	6-5	6-18
	High-Flow Air Systems .....	6-6	6-18
	High-Flow Single-Point Bubbler .....	6-7	6-19
	Air System Components .....	6-8	6-19

Subject	Paragraph	Page
Effectiveness of the Air Systems .....	6-9	6-21
Design of a High-Plow Air System .....	6-10	6-21
Flow Inducers .....	6-11	6-25
Section III. Ice Passage Through Dams		
General .....	6-12	6-25
Submergible Tainter Gates .....	6-13	6-25
Roller Gates .....	6-14	6-27
Conventional Tainter Gates.. ....	6-15	6-27
Gate Limitations in Winter.....	6-16	6-27
Other Ice Passage Schemes .....	6-17	6-27
Section IV. Lock and Dam Deicing		
General .....	6-18	6-27
Thermal Measures Against Wall Icing .....	6-19	6-28
Surface Treatments to Reduce Ice Adhesion .....	6-20	6-30
<b>CHAPTER 7. OPERATIONAL SOLUTIONS</b>		
Section I. Vessel Scheduling or Convoying		
Introduction .....	7-1	7-1
Operational Choices .....	7-2	7-1
Transit Scheduling or Convoying .....	7-3	7-1
Section II. Operational Techniques at Locks and Dams		
Introduction .....	7-4	7-2
Methods Used at Locks .....	7-5	7-4
Methods Used at Dams .....	7-6	7-5
Section III. Warm Water Use		
Introduction .....	7-7	7-5
Sources of Warm Water .....	7-8	7-5
Warm Water in the Context of Ice Production.....	7-9	7-7
Effects on River Ice of Warm Water Release .....	7-10	7-8
Section IV. Unconventional Energy Use		
Introduction .....	7-11	7-17
Baseline Power Requirements .....	7-12	7-17
Groundwater Heat .....	7-13	7-18
Solar Energy .....	7-14	7-22
Wind Energy .....	7-15	7-23
Conclusions .....	7-16	7-23
<b>CHAPTER 8. MODEL TESTS</b>		
General .....	8-1	8-1
Modeling Broken Ice.....	8-2	8-1
Modeling Sheet Ice .....	8-3	8-1
Model Calibration .....	8-4	8-2
Model Distortion .....	8-5	8-2
Considerations in Choosing Modeling.....	8-6	8-2

Subject	Paragraph	Page
<b>APPENDIX A.</b> <b>BIBLIOGRAPHY .....</b>		<b>A-1</b>
<b>APPENDIX B.</b> <b>TERMS AND DEFINITIONS .....</b>		<b>B-1</b>
<b>APPENDIX C.</b> <b>TYPICAL RIVER ICE MANAGEMENT STUDY</b>		<b>C-1</b>
 <b>ILLUSTRATIONS</b>		
Figure 3-1.           Questionnaire for collecting information on ice problems .....	3-2	
3-2.           Ice accumulation in the upper lock approach area .....	3-3	
3-3.           Broken ice accumulation between the lower miter gate and the gate recess wall .....	3-4	
3-4.           Ice collar formation on the gate recess and chamber walls.....	3-4	
3-5.           Ice interference with floating mooring bitts in a lock chamber wall .....	3-5	
3-6.           Ice accumulation upstream of the gates of a navigation dam	3-6	
3-7.           Tainter gate structure and gate pier wall with icing that has accumulated through spray and splashing .....	3-7	
3-8.           Tainter gate frozen in place by ice formed by leakage past gate's side seals .....	3-8	
3-9.           Heavy accumulation of ice floes and brash ice .....	3-8	
3-10.           Transverse velocities forming secondary circulation cells in river bends .....	3-9	
3-11.           Broken, irregular vessel track around a sharp river bend.	3-9	
3-12.           Shore ice formation .....	3-10	
3-13.           River divided into two channels by an island; the main channel is open while the secondary or back channel is ice-covered .....	3-11	
3-14.           Navigation track in the middle of the channel, with a fleeting area at the near bank.....	3-12	
4-1.           Flowchart of Long-Term Water Temperature Forecast model	4-5	
4-2.           Typical output information of the Long-Term Water Temperature Forecast model .....	4-6	
4-3.           Forecast-model accuracy illustrated by plot of error as a function of days since forecast was made .....	4-7	
4-4.           Flowchart of Mid-Winter Ice Forecast model .....	4-8	
4-5.           A river system represented by nodes and branches, for use in the Hydraulic Model .....	4-9	
4-6.           Flowchart of the logic used in the Ice Model .....	4-13	
4-7.           Overall flowchart of the Ice Forecasting System .....	4-19	
4-8.           Portrayal of the output of the Ice Forecasting System for the upper Ohio River during the 1985-86 winter .....	4-23	
4-9.           Typical output information from the Mid-Winter Ice Forecast model, covering a five-day period on the upper Ohio River	4-24	

Subject	Paragraph	Page
ILLUSTRATIONS (Cont'd.)		
5-1.	Schematic of data collection system for ice information .	5-1
5-2.	Water-temperature measurement system .....	5-3
5-3.	Water-temperature probe within the probe adapter.....	5-3
5-4.	Connector box .....	5-4
5-5.	Schematic wiring diagram of DCP interface box .....	5-6
5-6.	Generalized video equipment setup in an aircraft for vertical aerial videotaping .....	5-14
5-7.	Simple video camera mount in the floor of an aircraft for through-a-port videotaping .....	5-14
5-8.	Schematic diagram of a ground-based time-lapse video system	5-17
6-1.	Typical ice boom arrangement .....	6-2
6-2.	Cross sections of ice boom timbers and pontoons for a variety of ice boom designs .....	6-4
6-3.	Typical ice boom anchors .....	6-7
6-4.	Plan view of the Lake St. Francis ice boom built in 1981	6-9
6-5.	Plan view of the Allegheny River ice boom built in 1982	6-10
6-6.	Line array anchoring an ice sheet that has cracked free from shore .....	6-11
6-7.	Cylindrical sheet piling mooring cells upstream of a navigation dam .....	6-11
6-8.	Diagram of a proposed movable ice deflector composed of three barges and a towboat .....	6-12
6-9.	General plan and location of artificial islands, ice booms, and light piers in Lake St. Peter, St. Lawrence River .....	6-13
6-10.	Cross sections of artificial islands in Lake St. Peter .....	6-13
6-11.	Artificial islands in Lake St. Louis, St. Lawrence River .....	6-14
6-12.	Rock-filled scow stabilizing the ice cover in Soo Harbor, Michigan .....	6-15
6-13.	Typical section of a navigable pass portion of a wicket dam	6-17
6-14.	Light pier in Lake St. Clair, Michigan .....	6-17
6-15.	Schematic diagram of a complete high-flow air system ..	6-18
6-16.	A flusher on the land wall of the upper gate recess composed of a supply line and the manifold with orifices .....	6-20
6-17.	Downstream side of forebay sill .....	6-20
6-18.	Upper screen in operation .....	6-22
6-19.	Gate-recess flusher in operation .....	6-22
6-20.	Performance curves for gate-recess flushers .....	6-24
6-21.	Performance curves for an air screen .....	6-24
6-22.	Summary of submergible gates and their problems .....	6-26
6-23.	Ice passage at New Cumberland Lock on the Ohio River	6-28
6-24.	Fiberglass-reinforced plastic heat mats installed on a miter gate recess wall .....	6-29
6-25.	J-seal installation on tainter gate .....	6-31
7-1.	Effective design for a manual ice-chipping tool .....	7-3

Subject	Paragraph	Page
<b>ILLUSTRATIONS (Cont'd.)</b>		
7-2.	Record of waste heat discharge from a power plant that uses Mississippi River water for cooling .....	7-6
7-3.	Schematic diagram showing notation and heat transfer equations governing the heat flow from a water body through an ice cover to the atmosphere.....	7-9
7-4.	Ratio of heat loss through an ice cover to heat loss from an open water surface versus ice thickness, for three values of the heat transfer coefficient.....	7-10
7-5.	Rate of ice thickening versus ice thickness, for five values of average daily air temperature .....	7-11
7-6.	Length and width of open water resulting from side channel release of warm water into a river of either 3.3-ft or 9.9-ft depth, as functions of air temperature and heat discharge rate .....	7-16

**TABLES**

Table 4-1.	Mean annual air temperatures and first harmonic coefficients determined for selected first-order National Weather Service stations, for application to the air temperature representation in the Long-Term Water Temperature Forecast model .....	4-3
4-2.	Sample model coefficients for six stations on the upper Ohio River, for application to Long-Term Water Temperature Forecasts .....	4-5
5-1.	Parameters for ice-monitoring DCP sites .....	5-2
5-2.	Two methods for monitoring ice conditions on navigable waterways .....	5-9
5-3.	Aerial video coverage versus pixel size, altitude, and aircraft speed .....	5-13
