

**Engineering and Design**  
**SEISMIC DESIGN PROVISIONS FOR ROLLER**  
**COMPACTED CONCRETE DAMS**

**Table of Contents**

Subject	Paragraph	Page	Subject Page	Paragraph
<b>Chapter 1</b>			<b>Chapter 4</b>	
<b>Introduction</b>			<b>Design Earthquakes</b>	
General . . . . .	1-1	1-1	Definition . . . . .	4-1 4-1
References . . . . .	1-2	1-1	Operating Basis Earthquake (OBE) . .	4-2 4-1
Explanation of Terms . . . . .	1-3	1-1	Maximum Credible Earthquake	
Background . . . . .	1-4	1-1	(MCE) . . . . .	4-3 4-1
Design Philosophy . . . . .	1-5	1-1		
Design Earthquakes . . . . .	1-6	1-1		
Acceptance Criteria . . . . .	1-7	1-2		
Important Factors . . . . .	1-8	1-2		
Analysis Methods and Procedure . . .	1-9	1-3		
Coordination . . . . .	1-10	1-3		
<b>Chapter 2</b>			<b>Chapter 5</b>	
<b>Seismic Design Criteria</b>			<b>Design Response Spectra and</b>	
Stability . . . . .	2-1	2-1	<b>Acceleration Time Histories</b>	
Response to Ground Shaking . . . . .	2-2	2-1	Defining the Design Earthquake . . . .	5-1 5-1
Foundation Fault Displacement . . . .	2-3	2-2	Developing Design Response	
Refined Dynamic Analyses Methods	2-4	2-6	Spectra . . . . .	5-2 5-1
			Developing Acceleration Time	
			Histories . . . . .	5-3 5-1
			Dynamic Analysis by Modal	
			Superposition . . . . .	5-4 5-2
			Types of Design Response Spectra . . .	5-5 5-2
			Horizontal and Vertical Design	
			Response Spectra . . . . .	5-6 5-3
<b>Chapter 3</b>			<b>Chapter 6</b>	
<b>Material Properties of RCC</b>			<b>Earthquake Load Cases</b>	
Similarities of RCC and			Load Combinations . . . . .	6-1 6-1
Conventional Concrete . . . . .	3-1	3-1	Dynamic Loads To Be Considered . . .	6-2 6-1
Compressive Strength . . . . .	3-2	3-1	Static Loads To Be Considered . . . . .	6-3 6-1
Tensile Strength . . . . .	3-3	3-1	Static Loads Not To Be Considered . .	6-4 6-2
Shear Strength . . . . .	3-4	3-3		
Modulus of Elasticity . . . . .	3-5	3-3		
Poisson's Ratio . . . . .	3-6	3-4		
Tensile Stress/Strain Relationship . . .	3-7	3-5		
Dynamic Tensile Strength (DTS) . . .	3-8	3-6		
Allowable Tensile Stresses . . . . .	3-9	3-7		

Subject	Paragraph	Page
<b>Chapter 7</b>		
<b>Factors Significantly Affecting Dynamic Response</b>		
Evaluation Procedure and Objectives	7-1	7-1
Design Response Spectra . . . . .	7-2	7-1
Dam-Foundation Interaction, Damping Effect . . . . .	7-3	7-1
Dam-Foundation Interaction, Foundation Modulus Effect . . . . .	7-4	7-3
Hydrodynamic Effect . . . . .	7-5	7-5
Reservoir Bottom Absorption . . . . .	7-6	7-7
Method of Combining Modes . . . . .	7-7	7-8
Vertical Component of Ground Motion . . . . .	7-8	7-8
<b>Chapter 8</b>		
<b>Dynamic Analysis Methods and Procedures</b>		
Attributes of Dynamic Analysis Methods . . . . .	8-1	8-1
Comparison of Dynamic Analysis Methods . . . . .	8-2	8-3
Dynamic Analysis Procedure . . . . .	8-3	8-4
Preliminary Design of New Dams . .	8-4	8-5
Final Design of New Dams . . . . .	8-5	8-6
Evaluating Existing Dams . . . . .	8-6	8-6
