

Corps sign standards are contained within a separate set of comprehensive sign standards manuals (EP 310-1-6a and EP 310-1-6b). The manuals include design methodology and visual standards for identification, directional, informational, instructional, safety and interpretive signs. Also included are guidelines for sign legends, specifications for materials and fabrication, and information on the establishment of a sign maintenance program.

Contact the district or division sign program manager located within the Natural Resources Management element, Operations or the National Sign Program Manager at the Sign Mandatory Center of Expertise, St. Paul District, for advice and assistance on sign development and other sign related issues.
